

EMERGENCY

Color Code:

After a disaster – let emergency responders know how you are in your home...

1

Securely post “easy to see” & properly colored signal(s) in a location easily seen from the street & obviously related to your home.

2

Hang signal(s) as quickly & securely as possible after you are sure of your conditions.

3

If conditions are unsafe outside, post your signal in a window that can easily be seen from outside.

4

Remember, consider your current condition may be deteriorating, & a current “OK” condition could change quickly. (In this situation, using a YELLOW signal may be best.)

5

If no signal is posted, a team of scouts assigned to your area will attempt to make contact with you ASAP.

What can be used as a signal?

(Weather Resistant!)

Long, Thicker Ribbon

Bright Towel or Clothe

Painted Object Easy to Post
